

bio-composites from waste materials

OTTAN

OTTAN is an impact-oriented startup whom developed a technology to up-cycle food and agricultural waste into bio-composites as an alternative to wooden, stone, acrylic and acoustic materials.

Ottan Materials are developed and designed to protect natural resources for future generations and bring waste into industry as a new raw material by creating delightful, sustainable and made to last surfaces. As a pioneer with its innovation in building materials, OTTAN draws attention from a wide range of industries, including but not limited to cladding, furniture, automotive and jewellery. Visionary product designers and interior designers may prefer Ottan to design with nature itself without compromising the environment.
