

Bio-innovated & biodegradable material

**PEELSPHERE**

PEELSPHERE® is a bio-innovated material born at the intersectionality of design, material science and sustainability, with a mission to inspire a sustainable, healthy and balanced lifestyle through its quality and beauty.

Looking at the vast number of wastes and pollution generated by the material industry, we saw the potential of environmental-friendly sustainable material that can help in alleviating the resource constraints, reducing climate change. Inspired by observing and exploiting the potentials of fruit-wastes, PEELSPHERE®, is introduced. It is a truly circular material made from fruit waste and algae through advanced material engineering. It is created by redefining fruit waste, reducing carbon footprint and designing for circularity. As an ideal alternative to leather and synthetic leather, PEELSPHERE® is beautiful, durable, versatile and biodegradable.

With recycle, redesign and remanufacturing, the material enters a closed-looped system, extending its lifespan and realize its full potential. We believe that sustainable material development must be accompanied by outstanding performance, aesthetics and versatility that enables timeless design.
