

PANELY inspects your building, plans, builds, installs and operates the photovoltaic system on the roof of the apartment building.

Regardless of whether you live in an apartment building or are a tenant in a commercial property. We supply you with solar power from the roof.

No effort for you - we take care of everything.

We conclude the necessary electricity contracts with tenants, measure and bill consumption for you in accordance with the law.

Tenants receive solar power from the roof as long as the sun shines and green electricity from the grid when it's dark.

Regardless of whether it's a previous renovation, additional charging infrastructure or a heat pump. We have the right solution for you.
