

Highrunners play the main role in our upcycling product range. It makes sense to sort some of these according to specific profiles and dimensions and then sell them as the “second best boards in the world”. We also offer our “mix packages” of different profiles, lengths and dimensions. A package always contains approximately 600 meters and we only deliver complete packages. As this is scrap wood, we do not give a guarantee on the wood.

Together with several material banks, we pass on our unused residual materials from production to other companies. This collaboration extends the life cycle of the materials in the supply chains, which benefits both the environment and the bottom line.
