

abatón panel - Quick-build panel for heating / cooling / humidity control / acoustics

abatón in three sets:

abatón panel is a surface cooling system that can regulate humidity.

This allows the ventilation system to be significantly smaller or to rely only on window ventilation.

Result: 30-60% energy savings without compromising on room comfort - acoustics and heating are of course also covered.

Installation:

Installation on ceiling or wall. As a closed ceiling, wall or free-floating as a climate sail. Coating with pure mineral fillers and paints. Factory pigmentation possible.

Materiality:

abatón panel consists of a mineral foam. Heating and cooling pipes made of oxygen-tight polypropylene are integrated into this.

An insulating layer of either cork or XPS is applied to the back.

Particularly suitable for:

New build and refurbishment of commercial properties.

Conversion of residential buildings to heat
